

Edition Comparison

Workflow for Everyone™

Enterprise Edition Features Explained

ACTIVE DIRECTORY ACCOUNT PROVISIONING

Workflow actions to support automated provisioning tasks such as: adding/removing users to/from Active Directory groups; creating, updating, and decommissioning Active Directory accounts.

EXCHANGE SERVER MAILBOX PROVISIONING

Create and remove Exchange Server (2003, 2007, and 2010) mailbox privileges for Active Directory accounts.

OFFICE COMMUNICATION SERVER PRIVILEGE PROVISIONING

Enabling/disabling Office Communication Server (2007 and 2010, as well as Live Communication Server 2005) privileges on Active Directory accounts.

USER PROFILES AND AUDIENCES

Workflow actions support add/update/delete operations on the SharePoint Server User Profile Store, including properties, Member Group, and memberships. Audiences can be created, deleted, modified, and recalculated.

UNIVERSAL WORKFLOW INBOX/STATUS

The two out of the box web parts, "My Workflow Tasks" and "Workflows I've Started" can be configured at a farm level, allowing users to refer to one location to track all workflows pertaining to them.

WORKFLOW REPORTING

Workflow statistics are available on each workflow providing a holistic view of workflow performance. This includes details on average run time, total runs, amount of workflows in progress, as well as user performance, making it a crucial feature to identify bottlenecks in business processes.

Reporting capabilities are further extended through data driven and graphical web parts including reports like 'average workflow completion time', 'standard variations', 'minimum and maximum completion times' and 'user response times'.

EXCHANGE SERVER INTEGRATION

Workflow actions to create Outlook tasks and appointments and retrieve suggested meeting times. For example, a leave approval workflow could add the approved leave to the applicant's and their manager's calendars. Because the Exchange Server web service APIs are used, this method is also suited to various on-premise, hosted, and hybrid architectures.

SEARCH

Execute queries against SharePoint Server's enterprise search engine and incorporate the results into workflows. This works with both full-text and property based queries.

BUSINESS DATA CONNECTIVITY

Nintex Workflow 2007 can query the SharePoint 2007 Business Data Catalog to retrieve data from line of business applications and external databases. Nintex Workflow 2010 can connect to SharePoint 2010 Business Connectivity Services to read and write data to external data sources.

SHAREPOINT RECORDS MANAGEMENT INTEGRATION

Workflows can submit documents to SharePoint Server record center sites, allowing for workflows to help manage content development throughout their entire life cycle, all with an easy user interface and with minimal complexity exposed to users.

EXCEL SERVICES

Excel worksheet models can be executed and used by workflows. Excel Services for SharePoint Server can expose calculation models and spreadsheet data via a SOAP Web service. This workflow action makes it easy for users to provide inputs and read results from worksheets.

WORD SERVICES

Workflow actions to manipulate Word documents via Word Services. Allows server based document construction, form field updates, and document conversion to PDF and other formats.

BIZTALK SERVER INTEGRATION

Enable interaction with BizTalk Server. The action can send messages into a BizTalk orchestration and/or wait for a message from BizTalk Server. This action allows a workflow to interact with any external system that BizTalk Server interoperates with.

MICROSOFT DYNAMICS CRM INTEGRATION

Workflow actions to create, delete, and update data in Microsoft Dynamics CRM software.

Nintex Workflow Edition Comparison Table

Legend

Feature is in both 2007 and 2010 versions

Feature is available in both versions, and has been enhanced in 2010

Feature is only available in 2010 version
